

*TwinPoint Gen2*  
**LOCKING SYSTEM**

*Folding door lock with internal and external access*

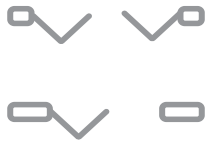

centor®

## TWINPOINT GEN2 INNOVATIONS

### Lockable from inside & out

Keyway on outside and thumb turn on the inside provides access and security for folding doors

### Perfect for even-panel configurations and two-panel bifolds.

With both egress and ingress capabilities, 2L2R and two-panel bifolds can now be offered without hesitation.

### Smaller gear box for maximized compatibility

A smaller gear box means TwinPoint Gen2 suits most stile and profile designs currently using other locks

### Strong materials & design

Designed to meet high demands for weather-sealing, security and wind load

## *DOUBLE YOUR DOORWAY*

### **A superior alternative to XO sliders - Replacement or new construction**

The new TwinPoint Gen2 offers a great opportunity for your customers looking to double their doorway by replacing XO sliding doors.

When designed in conjunction with Centor's F2 & F3 floor-rolling systems, traditional 2 panel sliding doors can be removed and new folding doors can be installed without having to worry about limited header size or providing separate exterior access.

## *EVEN-PANEL CONFIGURATIONS MADE EASIER*

### **Simple even-panel configurations**

Even-panel systems are more user-friendly thanks to TwinPoint Gen2's ingress/egress capabilities. If you're looking for 2L2R options TwinPoint Gen2 makes it easy to open, close and lock even-panel doors.

### **Compatible with 2 panel folding doors**

The TwinPoint Gen2's two-way lock is compatible with 2-panel bifolds. Previous configurations were restricted given their inability to lock and unlock from both sides.

### **Internal and external handle options**

The new TwinPoint Gen2 includes both internal and external handle options. This design allows locking and unlocking of folding doors from both inside and out. A keyway on the outside and thumb-turn on the inside allows access and security not previously available for folding doors.

*Manufacturers can now offer 2-panel folding doors in place of XO sliders for both new construction and replacement applications.*

## NEW COMPACT GEAR BOX

The lock's new slim gearbox fits neatly into prevalent panel thicknesses of 1 3/4" and 2 1/4".

<b>Non-keyed lock body</b>	1 1/4" wide, 5/8" thick, 5 3/4" long 32mm wide, 15.5mm thick, 145.5mm long
<b>Key lock body</b>	1 1/4" wide, 5/8" thick, 10 11/16" long 32mm wide, 15.5mm thick, 272mm long

## ENGINEERED FOR STRENGTH

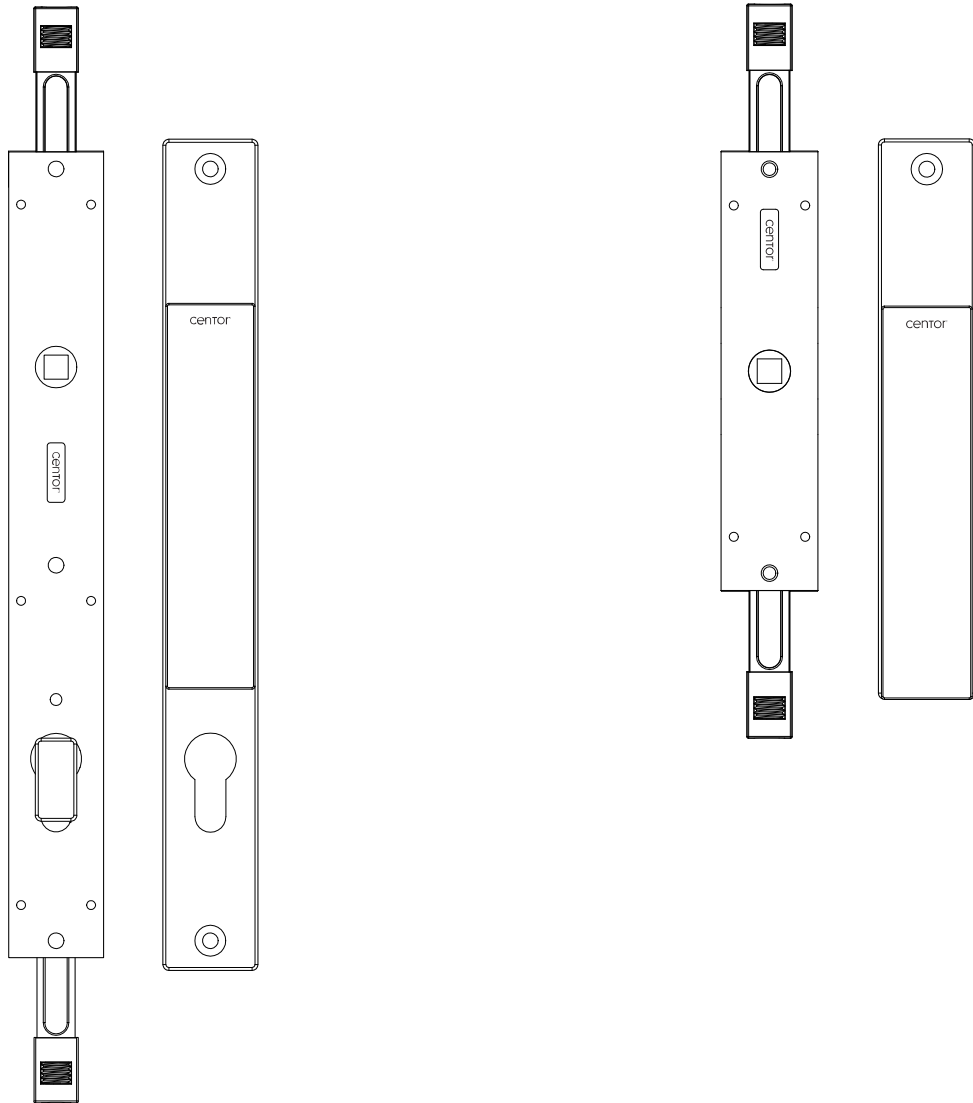

- Designed with robust materials to meet increased demands for weather sealing, security and wind load.
- 1" (24.5mm) throw bolts maximize structural performance in heightened weather conditions and protect your customer against unwanted visitors.
- In wood doors a full-length transmission rod cover provides reinforcement for improved performance.
- New durable handle design eliminates the need for an additional closing handle, reducing inventory and lowering cost.

## MODERN FINISHES

TwinPoint Gen2 hardware is available in brushed stainless steel and PVD bronze color options.

## OPTIONS TO SUIT EVERY APPLICATION

### Keyed

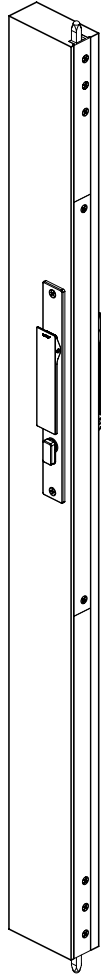

Thanks to the ability to be accessed from the outside, the TwinPoint Gen2 can be placed on an active panel of any folding door set, including swing doors and even-panel configurations.

The keyed TwinPoint Gen2 has key access externally and a thumb-turn internally.

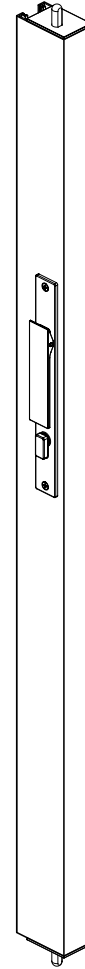

### Non-keyed

The non-keyed TwinPoint Gen2 can be used in combination with a keyed lock or as the only locking device - the choice is up to you and your client. Even when external access is not needed, the non-keyed lock provides peace of mind.

## COMPATIBLE WITH WOOD & HOLLOW PANELS

Wood panel arrangement

Hollow panel arrangement

### Flexibility for you

The TwinPoint Gen2 is compatible with both wood and hollow panels. Centor currently caters to aluminum, fiberglass and PVC panels and is able to work with fabricators to create solutions for your needs.

### The Centor advantage

At Centor, we are committed to working closely with you to develop flexible solutions including pre-assembled items and bulk supply with minimal packaging.
